

## Continuing Education

### WHERE DOES OUR FOOD COME FROM?

And why should we care?

The Sustainable Food Systems Certificate is designed for those who want to learn more about the issues surrounding today's food systems and what is needed to create sustainable food systems for the future.

► See reverse side for details.

## Continuing Education

### SUSTAINABLE FOOD SYSTEMS CERTIFICATE

This certificate provides a broad and integrated base of knowledge for those interested in our local food system model, as well as the complex history, policies, businesses, strengths, and challenges in the food industry. Learners will acquire the knowledge and skills to work in a regional food system in the areas of production, advocacy, service, and education and will gain a strong foundation that is needed to create change and build a sustainable food system for the future.

#### Learn about:

- The roots of U.S. agriculture
- Genetically modified foods
- Urban farming
- Climate change & food production
- Fair Trade and social justice
- The U.S. Farm Bill and how it affects you, and more...
